Dear Pharmacos,

The Pharmamedix have attracted a plethora of scientific researchers and pharma fraternity all over India and around the globe since its beginning. During this time, an ample number of research and review scientific papers have been published in the larger interest of budding pharmacists, aimed for promoting good scientific work in the field of pharmaceutical and biological sciences. This shows that the Pharmamedix has proven its competence, influence, and reliability to regularly appear in unique publication. During these years, the Pharmamedix has been successful in maintaining its apt and quality publication.

The Pharmamedix is not only featuring current research in academia, industry and research centers, but also worried over quality deterioration by mushrooming of journals pouring in recent era. Any Tom, Dick and Harry is publishing scientific journals without experience and editing abilities. There must be some governmental and professional barriers for allow such publications. It is our professional responsibility that one must be aware about where his or her research is publishing. The editorial team must be very serious about maintaining its integrity and quality and never allow publishing whatever trash for the sake of money. The Pharmamedix is very much concerning about the genuine research. Many students looking for short cuts and submit fake research for the sake of submitting their post-graduate and doctorate research because there is two three article necessity for submission and getting degree. All universities must look into the matter seriously, there should not be any such bound, if any researcher is publishing its work than some committee should justify it and found its correctness than some extra benefits or marks should be awarded so researcher will be motivated for doing genuine research.

Another concern for the job market for the pharmacists, chances is, if you ask most general public about the job outlook for pharmacists, they would say it is marvelous. For many years, pharmacy graduates have enjoyed hundred percent employments in the areas of their choice. According to the Bureau of Labor Statistics, India, employment of pharmacists is projected to grow 15% from 2012 to 2022.

I would like to extend my sincere thanks to all the pharma scientists, students and faculty members of institutions of India and abroad who have contributed in this issue. I also thank all the reviewers, editorial board members, President and all the office bearers and members of Pharmamedix, for their constant support and encouragement in bringing out this special volume

of The Pharmamedix. I hope that you will enjoy the articles and look forward for your valuable feedback to further improve The Pharmamedix in future.

-Dr. Kamal Singh Rathore
